

ABSTRACT OF THE DISCLOSURE

1 A brake assembly for inline skates. The brake assembly has
2 a braking roller which is turned by one or more of the wheels of
3 the inline skate when the roller is in a braking position. The
4 braking roller then expands outwardly and causes its outer
5 surface to rub against a braking surface causing a braking
6 action. The braking roller may be carried by a pair of carrier
7 plates movably positioned within the frame which holds the inline
8 skate brake wheels.
